# Fire-Aware Robot Dogs

## Machine-Learning Wildfire Forecasts for Safe Navigation and Scouting

**Shawn Zeng** · Monta Vista High School

**ONGOING WORK · CURRENTLY IN SIMULATION**

built & tested in simulation
proposed robot-dog use

### 1 Predict

The model forecasts **when** each 50 m cell will catch fire.

### 2 Safe route

Plan paths that avoid cells predicted to ignite **before the dog gets through**.

### 3 Escape path

Always keep a way out that the forecast says **will stay clear**.

### 4 Scout

Check the fire edge and the **planned containment line** before crews commit.

### 5 Feedback

Send back real fire position, wind and fuel so **the next forecast is better**.

robot dog

## Know where the fire *will* be – not just where it is.

- **Safer crews** — Fewer firefighters sent into danger to look.
- **Robot stays safe** — Routes and exits keep it from getting trapped.
- **Smarter sensing** — Measure where it changes decisions.
